INTRODUCTION

What is web designing ?

Web design is the visual aesthetics and page layout of a website. The web design process starts with a visual concept, which we could sketch by hand or with software like Photoshop. Then, we use HTML, CSS and javascript to build the website.

Web designing deals with the process of developing a website. A web designer uses images, text, html5, Responsive web design, CSS3, information architecture, colours, fonts and other interactive elements to produce a webpage. Web designers use markup language mostly HTML for creating structure and CSS for presentation.

Project Title : Car Buying And Selling website

Objective : The objective of online car buy sale system is to develop an online web application using which customer across India can buy or sale used car online. Using this web application customer can search used cars based on various criteria and buy online cars user can also compare two cars for better selection.

In this project "Car buying and selling website" we design a webpage, in these web page we introduces so manys cars in beside that the user can also compare two cars very easily as compare to another website.

ARVRN Page No. Date / /

In these web page, we also introduces a "HOME" button, "LOGIN" button, "NEW REGISTRATION" and also a "CONTACT US" through the user can give their feedback regarding to the website. and if the user having any program regarding to the website they also comment it very easily.

Our first priority is to make a very simple website because through this the user can able to buy a car easily without ~~any~~ facing any problem.

we can merge the several information in one another because whenever, a new user enter in the website they can't get confused to see ~~som~~ so many options.

Because we all know that whenever we enter any to website first time so we can't know about the things

in the website and if their is a lost of option box is created we totally confused through that.
So, we decided that to create a very simple & useful website so any user can able to buy a car very easily and in a best price.

And, our website also give a ~~garen~~ guarantee regarding for buying a car.

LOGIN

In login page we will be able to access our previously created account just by simply giving our correct username and password.
After giving, username & password press login to access the website.

In this page we use <HTML> tag to create login page and inside <FORM> and we use <input> to define on

input control.
We can also use 'CSS' for styling. we change the fontsize, font colour, background color, size of the box, alignment of the box, border colour using CSS in this webpage.

REGISTRATION

Here we use tag in HTML, so that it defines a section for <table> we modified the web-page by styling it. we modified, background color, text_size, text-color, alignment etc.

In Registration, we will be able to create our new account and can access it any time with our login ID and password only whenever you want.

Once we enter our detail and submit. It will be ~~start~~ stored in the system and no one will be able to access

it. In 'Registration', we will be asked to give our Name, Username, E-mail and new password.

Contact form.

Here, we asked give your contact detail. You have to give your name. You have to choose the country name from the given option. In Feedback portion, you can give your contact detail as, mobile number or active email id through which company can inform you anything about the website to you.

We use to define a section for <form>, <select> to give the options of the country. We used 'CSS' to modify, size of the box, border, height, background-color, font size, text colors.

Objective of the project:

The objective of Online Car Buy Sale System is to develop an online web application using which customer across India can buy or sale used cars online. Using this web application customer can search used cars based on various criteria and buy online cars User can also compare two cars for better selection.

Survey Says:

- Currently there are many websites available that provides the facility of selling and buying cars online. But some functionality is missing in the existing websites.
- Some websites do not provide the facility of comparing two or more cars at a time.
- Some website does not provide photo gallery of car which contains exterior images of the car.
- Some websites do not provide the facility of posting reviews of the car.
- Some websites do not provide such online facility for all cities across India.
- So, keeping these functionalities in mind I proposed to design a new system that contains all the missing functionalities of current system.

Future Planes:

In this project **"Car buying and Selling website"** we can both **HTML** and **CSS** for designing the webpage in a better way so the people who enter in the site they can't fell bad. through HTML we will generate the different tag so the different division and table will generate easily.

Firstly, we plane to make the webpage beautiful and simple so the person who enter the site they can't get difficulties for searching the car or for searching any enquiries related to car.

Secondly, we try to make it simple with the help of **CSS** and **JavaScript** which save the memory and time and it look beautiful.

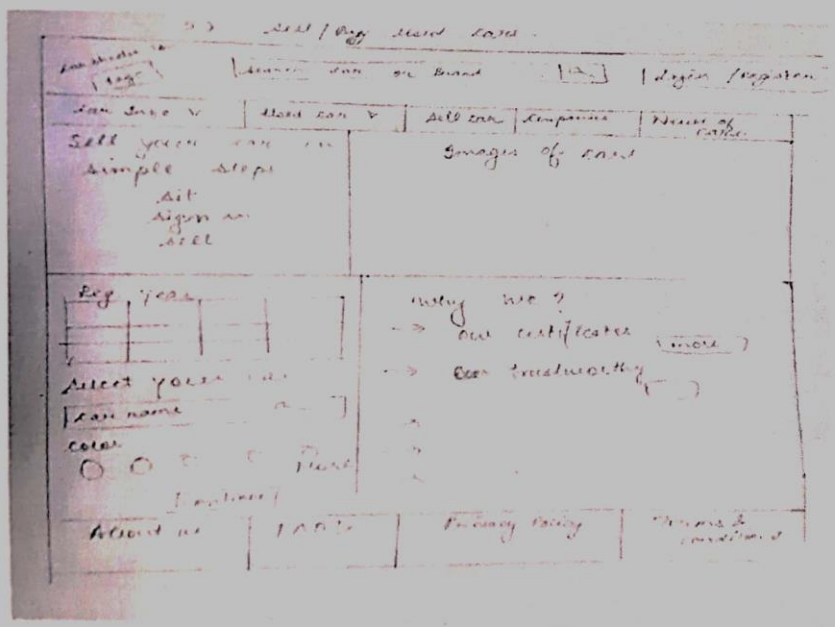
A. The new proposed system will cover, so the customer can buy or sale their used cars online using this website.

B. It provides the facility of comparing two or more cars so that customer can easily take the decision about which car to buy.

C. It provides the facility of uploading multiple images of used car including so that customer can easily view the status of car.

D. It also provides the facility of posting review regarding car so that new customer can read the review and then buy the car.

E. It Provide Top List on Buying Preference.



THANKYOU!
